## REGULATORY CONTACT RECORD

---

**Date/Time:** February 11, 2002/ 1:45 p.m.

**Site Contact(s):** Tracey Spence

**Phone:** 303- 966-4322

**Regulatory Contact:** David Kruchek

**Phone:** 303-692-3328

**Agency:** CDPHE

---

**Purpose of Contact:** Discussion of use of onsite soil and gravel as backfill at B123 site

---

### Discussion

A telephone conversation was held with David Kruchek regarding use of soil excavated adjacent to the west foundation footer wall as backfill material. I informed Mr. Kruchek that we excavated this soil to expose the inside foundation footer wall and base of footer along the southwest section of the B123 slab. I informed Mr. Kruchek that, based on B123 process knowledge and the existing B123 subsurface soil data (summarized in the *Industrial Area Sampling and Analysis Plan Fiscal Year 2002 Addendum #IA-02-01*), there is no known contamination associated with the building and subsurface soil in this area, and that we intend to return this soil into the 3-foot wide by 4-foot deep trench. Mr. Kruchek stated that he does not have a problem with returning the excavated soil to the trench as long as the data is sufficient to indicate that this soil is not contaminated.

I also informed Mr. Kruchek that we intend to leave the gravel beneath the B123 concrete slab in place for use as backfill material given that we don't have reason to suspect the gravel is contaminated, again based on process knowledge and the existing concrete and soil sampling data for B123. I told Mr. Kruchek that we plan to turn the gravel into the soil and excavate through the gravel as required to remove process waste lines underlying the gravel. Mr. Kruchek stated the he does not have a problem with this if the gravel is turned into the soil and covered for proper site grade and runoff.
